

Welcome to the easier way to place examination headers.

The real 'README' starts on the next page, but here is a brief summary of what to expect.

1. Installation is a bit technical, even scary if you've not before been in the bowels of Word's "Visual Basic for Applications" (VBA) features. The last page below explains the process stepwise. Your incentive to master this step? Well, after you have this macro, you'll be able to insert a new examination header on its range of pages in under 10 seconds, more-or-less.

2. You are installing not just ONE macro, but five. They are named carefully so they will appear together in the macro list that appears when you type Alt-F8.

InsertExaminationHeader	This is your new workhorse and time-saver.
InsertExaminationHeaderAssignKey	Makes Shift+Ctrl+Alt+H a shortcut for your macro.
InsertExaminationHeaderClearAll	Removes all section breaks, resets header.
InsertExaminationHeaderSettings	Choose left/center and title-case/capitals.
InsertExaminationHeaderUnassignKey	Removes Shift+Ctrl+Alt+H as the shortcut.

The first time you use the InsertExaminationHeader macro, the 'settings' procedure will be called automatically — two simple input dialogs, click yes or no.

3. In use, to place an examination header, you make a sloppy selection that touches each page in the range where you want the header and invoke the macro. Enter the text in a pop-up box. A few seconds later you will have your headers, with the pages set off with section breaks. Undo works.

The developer welcomes any feedback, suggestions, or reports you think are important.

MarkGardnerEditor@outlook.com

Welcome to the easier way to place examination headers.

Thank you for obtaining the Word macro "InsertExaminationHeader" (IEH); it speeds up the process of placing examination headers as the final step of transcribing legal proceedings and reduces the rate of time-consuming errors. (At this time, examination headers are mandatory only for federal-case transcripts, as far as the author knows.)

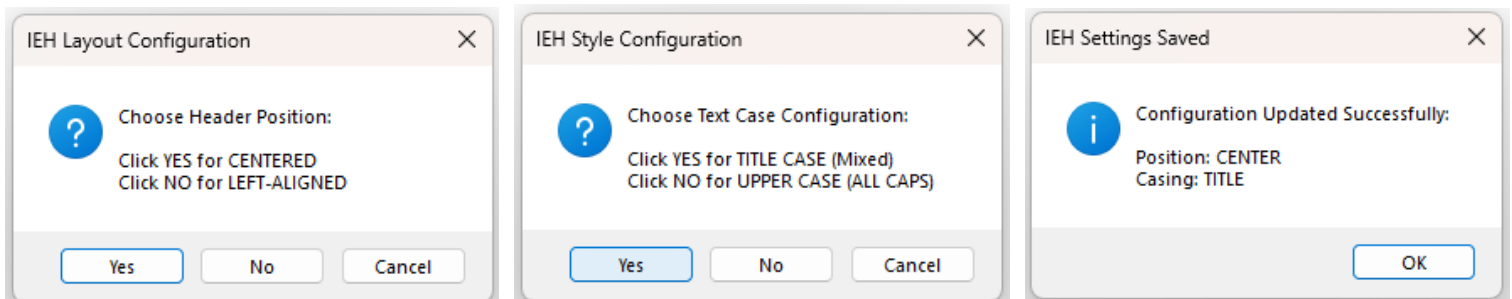

Use is relatively easy; the only preparation for your document is to assure that it is otherwise final. To insert a header, make a sloppy selection including the pages where a particular header is needed and enter the text in an input box. Details are given below. Please read the license information at the end of this document.

TWO CONSIDERATIONS AS YOU PROCEED: 1) This macro is not 'automatic'; you still have to determine where the headers go, and run the macro appropriately to insert the desired header text. 2) The macro has been tested in several environments (all but the oldest ones). Even so, you should save a copy of your document before using the macro. Your feedback is welcome – send to MarkGardnerEditor@outlook.com. If you will provide your email address, you will be notified of any updates (your email address will not be used for any other purpose). INSTALLATION INSTRUCTIONS ARE GIVEN BELOW.

On first run

As the instructions further down will repeat, the first thing to do with your legal document needing examination headers is to make a 'fake' header on page 1. The author uses the word "temporary"; the VBA operations need this section as a sort of anchor; you will benefit as well, because the first page is supposed to be without a page number — isolated this way in its own section, you can later just delete the entire header without problems; this is shown in the video at <https://www.youtube.com/watch?v=rhFolzDcSfs>.

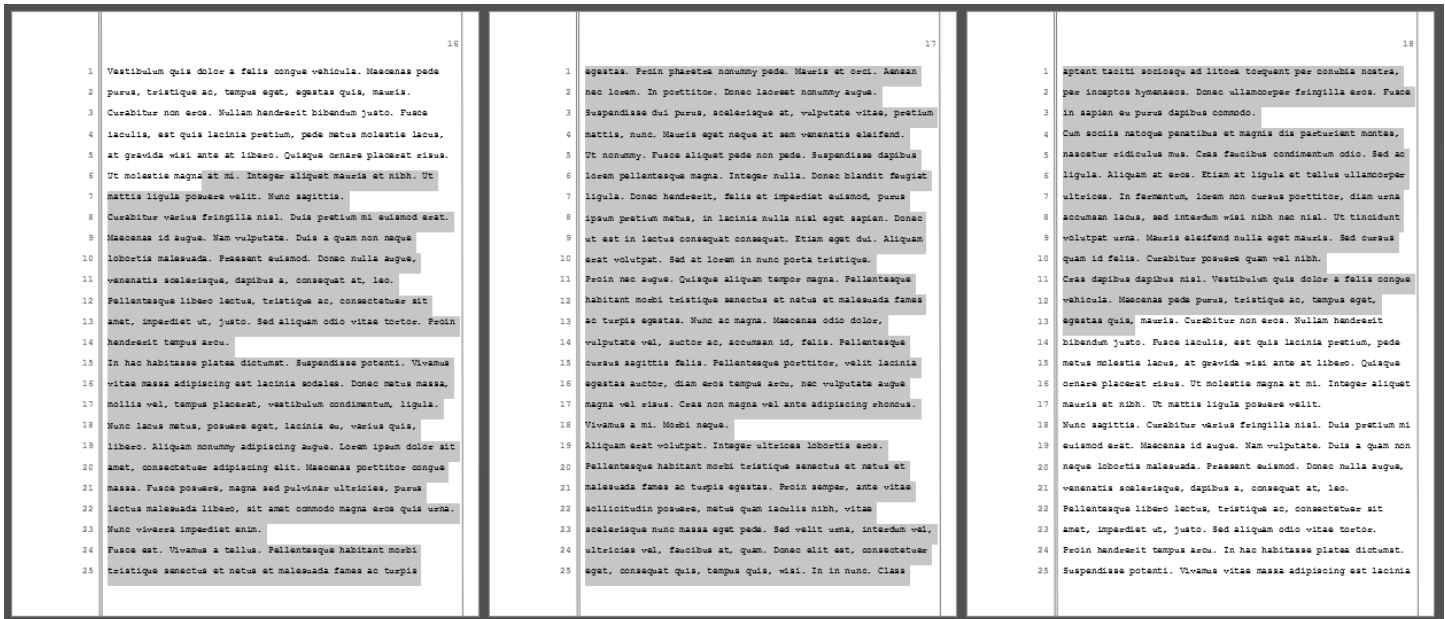

The macro can be configured to specify the placement of the header text (left or centered) and the treatment of the header text (title case or all caps). The first time you run the macro, a configuration step will run, presenting these two input boxes in turn; the ordinary choice is 'yes' in both, to meet standard requirements. The options are available in case your agency or court has different standards.

General use of the macro

Before running the macro, you will choose the pages where you want the header to appear by making a selection — either click and drag, or click once at the start and use the mouse wheel or the vertical scroll bar to reach the last page, then hold Shift and click again in the last page. The macro will operate on the pages you select.

Note that the selection does not have to be neat; start anywhere on the first page and end anywhere on the last page (even if it's the same page):

When the macro is run, this dialog box will open for your text input:

Enter Header Text

InsertExaminationHeader v1p0.

TO PROCEED, enter the header text below (e.g., "Smith - Direct"; it will be set correctly).

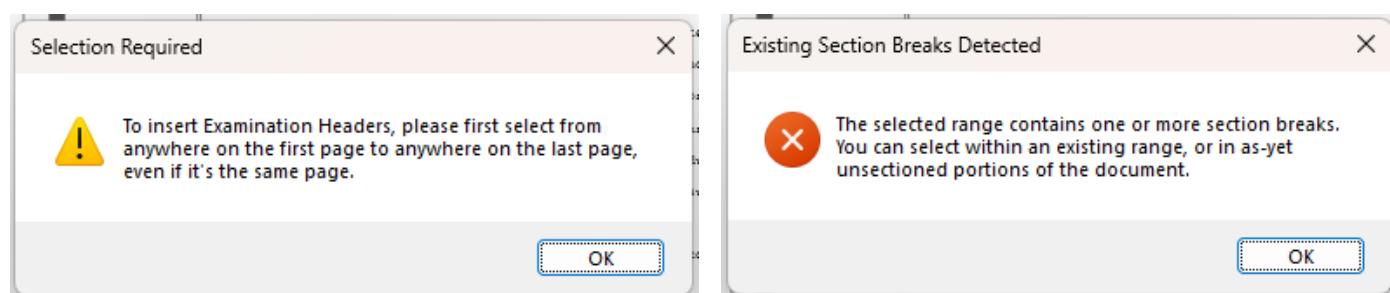

TO CANCEL, enter 'No' or press Cancel.

OK Cancel

Click 'OK' or press 'Enter', and the macro will run and place the header on the specified pages. The selected pages will be isolated with section breaks, and the headers before and after will be identical to what they were before. Note that the macro will not put a header on the last page unless you select it individually; however, the need is virtually non-existent in transcriptions.

Besides the interruption to ask for configuration choices, there are two other conditions that will present information boxes and abort the process. These occur if no selection has been made, or if the selection includes an existing section break:

As the range warning explains, you may select any portion of the document that does not contain a section break. This permits, for example, correction of cases where too many pages have been selected and given headers. Just select them, give them a new header, perhaps "delete" or some such (the macro won't accept an empty text, or one with just spaces). After the macro places new section breaks around these pages, you can just open the header and delete the scratch text.

There is also notification of table-based headers; the section breaks will be inserted, but the contents of the table will not be modified and must be finished manually.

Note that the macro does not finish these tasks with surreal speed; it's not slow, either, but there are technical reasons for the not-quite-as-fast-as-lightning operations. You will almost certainly find it is faster than the manual methods and less prone to error. You can watch the YouTube video to get an idea of what the speed is.

Note that InsertExaminationHeaderClearAll is provided as the ultimate restart. It clears all section breaks and installs the default header, i.e., two alignment tabs and a page field.

If there are problems, feel free to contact the author at the email given above. The license granted for use, in consideration of the nature of the project and the free distribution and support, is given on the next page. This is the text that appears at the top of the macro.

```

'=====
' InsertExaminationHeader Macro
' Version 1.0 (Release)
' Copyright (c) 2026 Mark Gardner
'
' LICENSE:
' Permission is granted to any possessor of this macro to install and use it
' freely, provided that:
'   (1) This macro is not modified in any way;
'   (2) This copyright and license notice is preserved in full;
'   (3) Distribution to others is permitted only if the macro is provided
'       entirely free of charge and in its original, unmodified form.
'
' This software is provided "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR
' IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY,
' FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT. IN NO EVENT SHALL
' THE COPYRIGHT HOLDER BE LIABLE FOR ANY CLAIM, DAMAGES, OR OTHER LIABILITY.
'
' A new user is encouraged to read any supplied instructions in full, and to
' practice and learn the procedures before applying this to a production document.
' The brief outline of instructions given below is not complete.
'
' If there is any question whether a copy is unmodified, obtain a fresh copy with
' https://github.com/markgardnter620/insert-examination-
header/releases/latest/download/InsertExaminationHeader.zip
'
' INSTRUCTIONS (abbreviated):
' See the distribution ReadMe.txt for full instructions. Briefly:
'   - Select a portion of page 1 and set a header of "temporary".
'   - Select the range of pages where examination headers are required;
'       precision is not required -- begin the selection anywhere on the first
'       page and end it anywhere on the final page, even if it's the same page.
'   - Invoke the macro (it is convenient to assign it to a key combination
'       such as Shift+Ctrl+Alt+H).
'   - Enter the desired header text (e.g., "Smith - Direct") when prompted.
'   - The macro will set the text to all capitals or to title case as specified
'       in configuration (use the macro InsertExaminationHeaderSettings) and
'       apply headers to the selected pages, placing section breaks before and
'       after as needed. Review results carefully.
'   - Note that the macro may take several seconds to complete; the system
'       'beep' sounds twice when it is done.
'
' Installing this file per the instructions will add five (5) macros to the
' list of macros included in "Macros dialog box" (Alt+F8):
'   InsertExaminationHeader           the primary workhorse of the set
'   InsertExaminationHeaderAssignKey  assigns shortcut Shift+Ctrl+Alt+H
'   InsertExaminationHeaderClearAll    removes all section breaks and headers
'   InsertExaminationHeaderSettings    user choice center/left // title/caps
'   InsertExaminationHeaderUnassignKey removes shortcut Shift+Ctrl+Alt+H
'
' Please make comments, suggestions, or disfrugalty reports to
' MarkGardnerEditor@outlook.com, subject line. "IEH" or other clear reference.
'=====

```

How to install the IEH macros

Before starting, ensure you have extracted (unzipped) the download folder, preferably to your Downloads or Documents folder. You will need the file InsertExaminationHeader.bas.

Step 1: Open the Visual Basic for Applications (VBA) editor

1. Launch Microsoft Word.
2. Open a blank document or the specific template you intend to use with this macro.
3. Press Alt+F11 on your keyboard (on some laptops, you may need to press Fn+Alt+F11).
 - *The VBA window will open.*

Step 2: Import the macro file

1. In the upper-left corner of the VBA window, look at the Project Explorer tree.
2. Locate and click on Normal (to make the macro available across all your Word documents) or click on the specific document name you currently have open.
3. Click File on the top menu bar, then select Import File... (or press Ctrl+M).
4. Navigate to the folder where you unzipped the download, select the macro file (InsertExaminationHeader.bas), and click Open.
 - *A new entry (likely under a folder named "Modules") will instantly appear in your Project tree. The code is now inside your environment.*

Step 3: Compile and save the project

To ensure Word registers the code cleanly and catches any environmental conflicts immediately:

1. On the top menu bar, click Debug.
2. Click the very first option: Compile VBA Project (or Compile Normal, if offered).
 - *If the menu option turns gray and no messaging appears, your code is 100 percent syntactically perfect and ready to run.*
3. Click the Save icon () on the toolbar (or press Ctrl+S) to commit the new macro to your global template.
4. Close the VBA window to return to Word.

Step 4: (Optional) Verify the installation

To make sure everything is sitting where it belongs:

1. In your normal Word window, press Alt+F8.
2. You should see the macro 'InsertExaminationHeader' listed in the Macro dialog box, and four more with tails 'AssignKey', 'ClearAll', 'Settings', and 'UnassignKey'.

Step 5: (Optional) Attach to key or to ribbon icon

1. The author uses Shift+Ctrl+Alt+H to invoke the macro. This assignment will be made by the eponymous macro, and unmade with the other. 'InsertExaminationHeader' can also be assigned to an icon in the ribbon. Such assignments speed use, as they are easier than selecting the macro from the list.
